# 1 Package UnblockMeSolver

## 1.1 Modules

- **Map** (Section 2, p. 3)
  - **Map** (Section 3, p. 4)
  - **MapReader** (Section 4, p. 9)
  - **Move** (Section 5, p. 11)
  - **Piece** (Section 6, p. 14)
- **PathFinder** (Section 7, p. 16)
  - **AStar** (Section 8, p. 17)
  - **AStarNode** (Section 9, p. 19)
  - **Heuristics** (Section 10, p. 21)
  - **Node** (Section 11, p. 22)
  - **PathFinder** (Section 12, p. 24)
  - **Solver** (Section 13, p. 26)
  - **bfs** (Section 14, p. 27)
  - **dfs** (Section 15, p. 29)
- **test** (Section 16, p. 31)
  - **MapTests** (Section 17, p. 32)
    - \* **mapTests** (Section 18, p. 33)
    - \* **moveTests** (Section 19, p. 37)
    - \* **pieceTests** (Section 20, p. 39)
    - \* **readerTests** (Section 21, p. 41)
  - **PathFinding** (Section 22, p. 43)
    - \* **AStarNodeTests** (Section 23, p. 44)
    - \* **heuristicTests** (Section 24, p. 46)
    - \* **nodeTests** (Section 25, p. 48)
    - \* **pathFindingTests** (Section 26, p. 50)
  - **files** (Section 27, p. 53)

## 1.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

## 2 Package UnblockMeSolver.Map

### 2.1 Modules

- **Map** (*Section 3, p. 4*)
- **MapReader** (*Section 4, p. 9*)
- **Move** (*Section 5, p. 11*)
- **Piece** (*Section 6, p. 14*)

### 2.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

### 3 Module UnblockMeSolver.Map.Map

#### 3.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.Map'</code>

#### 3.2 Class Map

##### 3.2.1 Methods

**`__init__(self, graph, delimiter='\n')`**

Initialize the class by setting the graph and delimiters variables.

**Parameters**

**graph:** Represents the board that the game will be played on  
(*type=string | MapReader*)

**delimiter:** how to split the string  
(*type=string*)

Overrides: `object.__init__`

**`convertToMap(self)`**

Convert the graph into a matrix that can be viewed and modified.

**`setUpPieces(self)`**

Find every piece available in the board and add it to an array to keep track of them for future use.

**`setUp(self)`**

Set up the Map class and set the graph by either getting a a string from either a map reader or string as the graph and breaking if not valid.

**isWallOrGoal**(*self, point, num\_goals\_found*)

This will check if the point is a wall or goal and if not return False. Additionally, it will update the number of goals that have been found.

**Parameters**

**point:** the point being checked in the graph.  
(*type=character*)

**num\_goals\_found:** number of goals in the graph currently found  
(*type=integer*)

**Return Value**

if the point is a wall or a goal and number of goals currently found  
(*type=boolean, integer*)

**largeRowValid**(*self, row\_index, num\_goals\_found*)

This will test on the larger rows to see if it is valid. A larger row indicates that it is either the top or the bottom of the graph.

**Parameters**

**row\_index:** index for the row to be checked  
(*type=integer*)

**num\_goals\_found:** the number of goals that have been found  
(*type=integer*)

**Return Value**

If a large row provided is valid and number of goals currently found  
(*type=boolean, integer*)

**numColumnsMatch**(*self*)

Ensure that the number of columns matches for each row.

**Return Value**

if the number of columns matches for each row  
(*type=boolean*)

**topBottomRowsValid**(*self, num\_goals\_found*)

Make sure that both the top and bottom rows are valid according to the topBottomRowsValid function.

**Parameters**

**num\_goals\_found:** number of goals presently found  
(*type=integer*)

**Return Value**

If the top and bottom rows are valid and number of goals currently found  
(*type=boolean, integer*)

**midRowsValid**(*self*, *num\_goals\_found*)

Ensure that all the middle rows are valid entries with walls or a goal on both sides.

**Parameters**

**num\_goals\_found:** number of goals presently found  
(*type=integer*)

**Return Value**

if the middle rows are valid and the number of goals currently found  
(*type=boolean, integer*)

**playerFound**(*self*)

Check to see if the player, defined in Map.py, is in the map.

**Return Value**

player found in map  
(*type=boolean*)

**isValid**(*self*)

Test if the graph in the map class is valid or not.

**Return Value**

graph is valid or not  
(*type=boolean*)

**validAdditionMoves**(*self*, *move*)

This will handle move verificatin for moving to the right or down in the board. It will return an array of the the moves that can be made in the direction given.

**Parameters**

**move:** Array of moves in the direction of the move given  
(*type=[Move]*)

**validSubtractionMoves**(*self*, *move*)

This will handle move verificatin for moving to the left or up in the board. It will return an array of the the moves that can be made in the direction given.

**Parameters**

**move:** Array of moves in the direction of the move given  
(*type=[Move]*)

**isValidMove**(*self*, *move*)

Check if the move given is valid or not to make the move.

**Return Value**

if the move is valid or not  
(*type=boolean*)

**makeConfidentMove**(*self*, *move*)

Make a move on the board without checking for its validity.

**Parameters**

**move:** move to make on the board  
(*type=Move*)

**makeMove**(*self*, *move*)

Make a move on the board. Raise syntax error on bad move given

**Parameters**

**move:** move to make on the board  
(*type=Move*)

**getMoves**(*self*)

Get the moves available on the board.

**Return Value**

Array of moves available  
(*type=[Move]*)

**isSolved**(*self*)

If there is a goal found then the board is not solved. Complete checking is done as there may be a goal in any location.

**Return Value**

if the game has been solved or not  
(*type=boolean*)

**copy**(*self*)

Create a copy of this map and return it

**Return Value**

Copy of this map  
(*type=Map*)

**copyMove**(*self*, *move*)

Create a copy of the map and make a move on it; return the result.

**Parameters**

**move:** move to be made on copied board  
(*type=Move*)

**Return Value**

The new map with the move made on it  
(*type=Map*)

**copyConfidentMove**(*self*, *move*)

Create a copy of the map and make a move on it without checking for its validity. Return the result.

**Parameters**

**move:** move to be made on copied board  
(*type=Move*)

**Return Value**

The new map with the move made on it  
(*type=Map*)

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

**3.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

**3.2.3 Class Variables**

Name	Description
wall	<b>Value:</b> ' '
goal	<b>Value:</b> '\$'
empty	<b>Value:</b> '0'
player	<b>Value:</b> '**'
playerPiece	<b>Value:</b> '*'

## 4 Module UnblockMeSolver.Map.MapReader

### 4.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.Map'</code>

### 4.2 Class MapReader

#### 4.2.1 Methods

<b><code>--init--(self)</code></b>
Initialize MapReader class
Overrides: <code>object.--init--</code>

<b><code>load(self, file_name)</code></b>
Set flags and test if the file given exists. Throws IOError on file not existing.
<b>Parameters</b>
<b><code>file_name</code>:</b> Name of the file that contains definition of the map.
<i>(type=string)</i>

<b><code>get(self)</code></b>
Read the file and return the string inside
<b>Return Value</b>
string inside of the specified file
<i>(type=string)</i>

#### *Inherited from object*

`--delattr--()`, `--format--()`, `--getattr--()`, `--hash--()`, `--new--()`, `--reduce--()`, `--reduce_ex--()`,  
`--repr--()`, `--setattr--()`, `--sizeof--()`, `--str--()`, `--subclasshook--()`

#### 4.2.2 Properties

Name	Description
<i>Inherited from object</i> __class__	

#### 4.2.3 Class Variables

Name	Description
loaded	<b>Value:</b> False
file_found	<b>Value:</b> False

## 5 Module UnblockMeSolver.Map.Move

### 5.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

### 5.2 Class Move

#### 5.2.1 Methods

<b><code>--init--</code></b> ( <i>self</i> , <i>piece</i> , <i>right</i> , <i>up</i> )
Initialize data structure with required variables. Throws an error on incorrect value ranges and types given
<b>Parameters</b>
<i>piece</i> : The piece to be moved ( <i>type=character</i> )
<i>right</i> : If the piece should be to the right by a space ( <i>type=integer</i> )
<i>up</i> : If the piece should be moved up by a space ( <i>type=integer</i> )
Overrides: <code>object.--init--</code>

<b><code>isValid</code></b> ( <i>self</i> )
Ensure that the move is valid for the board and the piece is a character.

**equals**(*self*, *move*)

Test whether the two moves are equal.

**Parameters**

**move:** Move being tested for equality  
(*type=Move*)

**Return Value**

Whether the two moves are equal  
(*type=boolean*)

**toStr**(*self*)

Convert self to string.

**Return Value**

String representation of the move  
(*type=str*)

**left**(*piece*, *size=1*)

Instantiate a move that will go left

**Parameters**

**piece:** Character that represents the piece to be moved  
(*type=character*)

**right**(*piece*, *size=1*)

Instantiate a move that will go right

**Parameters**

**piece:** Character that represents the piece to be moved  
(*type=character*)

**up**(*piece*, *size=1*)

Instantiate a move that will go up

**Parameters**

**piece:** Character that represents the piece to be moved  
(*type=character*)

<b>down</b> ( <i>piece</i> , <i>size=1</i> )
--

Instantiate a move that will go down
--------------------------------------

<b>Parameters</b>
-------------------

<p><b>piece:</b> Character that represents the piece to be moved  <i>(type=character)</i></p>
---

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

**5.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 6 Module UnblockMeSolver.Map.Piece

### 6.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.Map'</code>

### 6.2 Class Piece

#### 6.2.1 Methods

<b><code>--init--</code></b> <i>(self, x, y, vertical)</i>
Initialize piece class
<b>Parameters</b>
<b>x:</b> x coordinate <i>(type=integer)</i>
<b>y:</b> y coordinate <i>(type=integer)</i>
<b>vertical:</b> marks whether this piece can move vertically or not <i>(type=boolean)</i>
Overrides: <code>object.--init--</code>

<b><code>move</code></b> <i>(self, move)</i>
Move the piece if the given move is valid
<b>Parameters</b>
<b>move:</b> Move that will change the location of the piece <i>(type=Move)</i>

**copy**(*self*)

Create a copy of self.

**Return Value**

Copy of this piece

*(type=Piece)****Inherited from object***`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`**6.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 7 Package `UnBlockMeSolver.PathFinder`

### 7.1 Modules

- **AStar** (*Section 8, p. 17*)
- **AStarNode** (*Section 9, p. 19*)
- **Heuristics** (*Section 10, p. 21*)
- **Node** (*Section 11, p. 22*)
- **PathFinder** (*Section 12, p. 24*)
- **Solver** (*Section 13, p. 26*)
- **bfs** (*Section 14, p. 27*)
- **dfs** (*Section 15, p. 29*)

### 7.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

## 8 Module UnblockMeSolver.PathFinder.AStar

### 8.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.PathFinder'</code>

### 8.2 Class AStar

object

UnblockMeSolver.PathFinder.PathFinder.PathFinder

UnblockMeSolver.PathFinder.AStar.AStar

#### 8.2.1 Methods

<b>populateQueue</b> ( <i>self</i> , <i>graph</i> , <i>queue</i> , <i>parent</i> )
Populate the priority queue with nodes and their cost.
<b>Parameters</b>
<b>graph:</b> Graph to get moves from to populate queue ( <i>type</i> = <i>Map</i> )
<b>queue:</b> Queue with nodes being added to it with the cost ( <i>type</i> = <i>Queue</i> )
<b>parent:</b> Parent for the nodes that will be created ( <i>type</i> = <i>AStarNode</i> )

<b>getPath</b> ( <i>self</i> , <i>heuristic</i> )
Get the best path to solve the given graph.
<b>Return Value</b>
Array of moves which represent the path found to solve the puzzle ( <i>type</i> = <i>[Move]</i> )
Overrides: UnblockMeSolver.PathFinder.PathFinder.PathFinder.getPath

*Inherited from UnblockMeSolver.PathFinder.PathFinder.PathFinder(Section 12.2)*

`__init__()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

**8.2.2 Properties**

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 9 Module UnblockMeSolver.PathFinder.AStarNode

### 9.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.PathFinder'</code>

### 9.2 Class AStarNode

object └─

UnblockMeSolver.PathFinder.Node.Node └─

UnblockMeSolver.PathFinder.AStarNode.AStarNode

#### 9.2.1 Methods

<b><code>--init--</code></b> ( <i>self, graph, move, parent, g, h</i> )
Initialize AStarNode class
<b>Parameters</b>
<b>graph:</b> Map that moves can be made on ( <i>type=Map</i> )
<b>move:</b> Move that resulted in the above graph ( <i>type=Move</i> )
<b>parent:</b> Parent node of this. Contains previous moves to get the current board. ( <i>type=AStarNode</i> )
<b>g:</b> Step cost for this node ( <i>type=number</i> )
<b>h:</b> Heuristic cost for this node ( <i>type=number</i> )
Overrides: <code>object.--init--</code>

<b>cost(<i>self</i>)</b> <hr/> Cost for this node. <b>Return Value</b> The cost to get to this state ( <i>type=number</i> )
---

*Inherited from UnblockMeSolver.PathFinder.Node.Node(Section 11.2)*

reconstructPath()

*Inherited from object*

\_\_delattr\_\_(), \_\_format\_\_(), \_\_getattr\_\_(), \_\_hash\_\_(), \_\_new\_\_(), \_\_reduce\_\_(), \_\_reduce\_ex\_\_(),  
\_\_repr\_\_(), \_\_setattr\_\_(), \_\_sizeof\_\_(), \_\_str\_\_(), \_\_subclasshook\_\_()

## 9.2.2 Properties

Name	Description
<i>Inherited from object</i>	
__class__	

## 9.2.3 Class Variables

Name	Description
g	<b>Value:</b> 0
h	<b>Value:</b> 0

## 10 Module `UnBlockMeSolver.PathFinder.Heuristics`

### 10.1 Functions

<code>manhattan(<math>x1</math>, <math>y1</math>, <math>x2</math>, <math>y2</math>)</code>
--

<code>euclidian(<math>x1</math>, <math>y1</math>, <math>x2</math>, <math>y2</math>)</code>
--

### 10.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnBlockMeSolver.PathFinder'</code>

## 11 Module UnblockMeSolver.PathFinder.Node

### 11.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

### 11.2 Class Node

**Known Subclasses:** UnblockMeSolver.PathFinder.AStarNode.AStarNode

#### 11.2.1 Methods

<b><code>--init--(self, graph, move, parent)</code></b> Initialize AStarNode class <b>Parameters</b> <b>graph:</b> Map that moves can be made on ( <i>type=Map</i> ) <b>move:</b> Move that resulted in the above graph ( <i>type=Move</i> ) <b>parent:</b> Parent node of this. Contains previous moves to get the current board. ( <i>type=Node</i> ) Overrides: object. <code>--init--</code>
<b><code>reconstructPath(self)</code></b> Construct the path from here that it took to make it here. <b>Return Value</b> array of moves to get to this point from the root node ( <i>type=[Move]</i> )

*Inherited from object*

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`,  
`__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 11.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 12 Module *UnBlockMeSolver.PathFinder.PathFinder*

### 12.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

### 12.2 Class *PathFinder*

object └─ ***UnBlockMeSolver.PathFinder.PathFinder.PathFinder***

**Known Subclasses:** *UnBlockMeSolver.PathFinder.AStar.AStar*, *UnBlockMeSolver.PathFinder.dfs.DFS*, *UnBlockMeSolver.PathFinder.bfs.BFS*

#### 12.2.1 Methods

<b><code>--init--</code></b> ( <i>self</i> , <i>board</i> )
Initialize Pathfinder class instance.
<b>Parameters</b>
<i>board</i> : board to be solved
( <i>type=Map</i> )
Overrides: <i>object.--init--</i>

<b><code>getPath</code></b> ( <i>self</i> )
Get the best path to solve the given graph.
<b>Return Value</b>
Array of moves which represent the path found to solve the puzzle
( <i>type=[Move]</i> )

*Inherited from object*

`--delattr--()`, `--format--()`, `--getattr--()`, `--hash--()`, `--new--()`, `--reduce--()`, `--reduce_ex--()`,  
`--repr--()`, `--setattr--()`, `--sizeof--()`, `--str--()`, `--subclasshook--()`

#### 12.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>--class--</code>	

## 13 Module UnBlockMeSolver.PathFinder.Solver

### 13.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

## 14 Module UnblockMeSolver.PathFinder.bfs

### 14.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.PathFinder'</code>

### 14.2 Class BFS

object 

UnblockMeSolver.PathFinder.PathFinder.PathFinder  UnblockMeSolver.PathFinder.bfs.BFS

#### 14.2.1 Methods

<b>populateQueue</b> ( <i>self</i> , <i>graph</i> , <i>move</i> , <i>queue</i> , <i>parent</i> )
Populate the queue with nodes and their cost.
<b>Parameters</b>
<b>graph:</b> Graph to get moves from to populate queue ( <i>type</i> = <i>Map</i> )
<b>move:</b> Move to get to the ( <i>type</i> = <i>Move</i> )
<b>queue:</b> Stack with nodes being added to it with the cost ( <i>type</i> = <i>Queue</i> )
<b>parent:</b> Parent for the nodes that will be created ( <i>type</i> = <i>Node</i> )

<b>getPath</b> ( <i>self</i> )
Get the best path to solve the given graph.
<b>Return Value</b>
Array of moves which represent the path found to solve the puzzle ( <i>type</i> = <i>[Move]</i> )
Overrides: UnblockMeSolver.PathFinder.PathFinder.PathFinder.getPath

***Inherited from UnBlockMeSolver.PathFinder.PathFinder.PathFinder(Section 12.2)***

`__init__()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

#### 14.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 15 Module UnblockMeSolver.PathFinder.dfs

### 15.1 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> <code>'UnblockMeSolver.PathFinder'</code>

### 15.2 Class DFS

#### 15.2.1 Methods

<b>populateQueue</b> ( <i>self</i> , <i>graph</i> , <i>move</i> , <i>stack</i> , <i>parent</i> )
Populate the stack with nodes and their cost.
<b>Parameters</b>
<b>graph:</b> Graph to get moves from to populate queue ( <i>type</i> = <i>Map</i> )
<b>move:</b> Move to get to the ( <i>type</i> = <i>Move</i> )
<b>stack:</b> Stack with nodes being added to it with the cost ( <i>type</i> = <i>[Node]</i> )
<b>parent:</b> Parent for the nodes that will be created ( <i>type</i> = <i>Node</i> )

<b>getPath</b> ( <i>self</i> )
Get the best path to solve the given graph.
<b>Return Value</b>
Array of moves which represent the path found to solve the puzzle ( <i>type</i> = <i>[Move]</i> )
Overrides: <code>UnblockMeSolver.PathFinder.PathFinder.PathFinder.getPath</code>

***Inherited from UnblockMeSolver.PathFinder.PathFinder.PathFinder(Section 12.2)***

`__init__()`

***Inherited from object***

`__delattr__()`, `__format__()`, `__getattr__()`, `__hash__()`, `__new__()`, `__reduce__()`, `__reduce_ex__()`, `__repr__()`, `__setattr__()`, `__sizeof__()`, `__str__()`, `__subclasshook__()`

### 15.2.2 Properties

Name	Description
<i>Inherited from object</i>	
<code>__class__</code>	

## 16 Package UnblockMeSolver.test

### 16.1 Modules

- **MapTests** (*Section 17, p. 32*)
  - **mapTests** (*Section 18, p. 33*)
  - **moveTests** (*Section 19, p. 37*)
  - **pieceTests** (*Section 20, p. 39*)
  - **readerTests** (*Section 21, p. 41*)

  - **nodeTests** (*Section 25, p. 48*)
  - **pathFindingTests** (*Section 26, p. 50*)
- **files** (*Section 27, p. 53*)

### 16.2 Variables

Name	Description
--package--	<b>Value:</b> None

## 17 Package UnblockMeSolver.test.MapTests

### 17.1 Modules

- **mapTests** (*Section 18, p. 33*)
- **moveTests** (*Section 19, p. 37*)
- **pieceTests** (*Section 20, p. 39*)
- **readerTests** (*Section 21, p. 41*)

### 17.2 Variables

Name	Description
<code>--package--</code>	<b>Value:</b> None

## 18 Module UnblockMeSolver.test.MapTests.mapTests

### 18.1 Variables

Name	Description
<code>__package__</code>	<b>Value:</b> <code>'UnblockMeSolver.test.MapTests'</code>

### 18.2 Class FakeMapReader

object —  
**UnblockMeSolver.test.MapTests.mapTests.FakeMapReader**

Fake object with method and member similar to mapreader class that the map class relies on

#### 18.2.1 Methods

```
__init__(self)
x.__init__(...) initializes x; see help(type(x)) for signature
Overrides: object.__init__ extit(inherited documentation)
```

```
get(self)
```

#### *Inherited from object*

```
__delattr__(), __format__(), __getattr__(), __hash__(), __new__(), __reduce__(), __reduce_ex__(),
__repr__(), __setattr__(), __sizeof__(), __str__(), __subclasshook__()
```

#### 18.2.2 Properties
